CR-120 UV

PROFESSIONAL, HIGH-SPEED CHEQUE SCANNERS

that are perfect for banks counter-top use.

Compact design, high-speed scanning

Quickly scan up to 120 or 150 cheques per minute with these highly compact devices – ideal for customer service desks – using accurate magnetic and optical reading, and include endorsement imprinters.

Smart UV scanning

The CR-120 UV includes built-in ultraviolet sensors for detecting anti-fraud patterns that prove cheques' authenticity, or highlighting surface rubbing that might indicate tampering. With UV scanning, both the 200dpi greyscale image and a UV image of the cheque are captured simultaneously, with no loss of speed.

imageFORMULA CR-120/CR-150 Series

Compact design, high-speed scanning

The CR-120 and CR-150 series scanners are small but fast cheque scanning devices that sit conveniently on any counter-top where space is at a premium. As well as scanning up to 12,000 cheques per day, at rapid speeds of up to 120 and 150 per minute, they also offer flexible space-saving options such as integrated magnetic swipe reader.
High-precision, double-sided cheque scanning

Both series of scanner employ precise magnetic ink character recognition (MICR) to read code line data, and also capture greyscale images of both sides of each cheque. Powerful OCR software then reads the characters from the scanned image and cross-check them using a unique algorithm to ensure maximum accuracy.

Flexible bundled software for simple integration

You can easily integrate your CR-120 or CR-150 series cheque scanners with existing systems including virtual device environments, using bundled software: Canon Scanning Utility, Canon ISIS/TWAIN driver, and a Ranger Transport API driver. Application developers can also take advantage of the Canon CR software development kit (SDK) to create custom capabilities.

Effortless imprinting

There is a built-in imprinter that enables quick and easy print endorsement on the back of cheques while they are being scanned. Up to five lines of 60-character text, as well as high quality bitmap images, can be printed in a single motion, ensuring no loss of overall cheque scanning speed.

Advanced image processing

Capture both printed and handwritten text accurately every time. Fine Text Filtering technology significantly reduces unwanted noise from patterned document background colours or images.

CR-150N Network Model

Offering convenient sharing via the network, the CR-150N model with built-in LAN port can be shared by multiple users to save counter space. The scanner can be used by all PC's on the network, or the IT administrator can manage access rights so that the scanner works only with specified users PC's.

Colour ID card imaging

Both series of cheque scanner have a built-in slot for the colour scanning of plastic cards, such as driver's licence, other ID cards, and even embossed bank and credit cards. This means that bank tellers can quickly verify customers' identity, and also easily record that they have done so.

Thermal Receipt Printer RP10

The optional RP10 Receipt Printer is the perfect companion to the CR-150 series for processing cheques and providing receipts from teller counter spaces. The RP10 is designed to be placed under the Cheque Scanner saving desk space, and supports both standard Windows driver and OPOS specifications.

Magnetic swipe reader

Added functionality through the optional magnetic swipe reader for bank cards.
